Звіт
з лабораторної роботи №2 з дисципліни
«Сучасні технології розробки WEB-застосунків на платформі
Microsoft.NET»

«Модульне тестування. Ознайомлення з засобами та практиками
модульного тестування»

Варіант NV

Виконав студент ПП-13 Дем'янчук Олександр Петрович
(шифр, прізвище, ім'я, по батькові)

Перевірів Бардін В.
(прізвище, ім'я, по батькові)

Київ 2023

Лабораторна робота №2

Варіант 2

Тема: Модульне тестування. Ознайомлення з засобами та практиками модульного тестування.

Мета: навчитися створювати модульні тести для вихідного коду розроблювального програмного забезпечення.

Постановка задачі

1. Додати до проекту власної узагальненої колекції (застосувати виконану лабораторну роботу No1) проект модульних тестів, використовуючи певний фреймворк (Nunit, Xunit, тощо).
2. Розробити модульні тести для функціоналу колекції.
3. Дослідити ступінь покриття модульними тестами вихідного коду колекції, використовуючи, наприклад, засіб AxoCover.

2	Черга	Див. Queue<T>	Збереження даних за допомогою динамічно зв'язаного списку

Висновки:

Висновок: на лабораторній роботі №2 вивчили теоретичні та практичні поняття в написанні модульних тестів, застосували знання на практиці, створюючи власні модульні тести для коду колекції, створеної в рамках лабораторної роботи №1. Мною було обрано фреймворк xUnit для написання модульних тестів, також допоміжний фреймворк FakeItEasy для створення моків і використовувався плагін dotCover для визначення рівня покриття коду модульними тестами.
